# Nansulate® Energy Saving Coatings Corona Beer Brewery

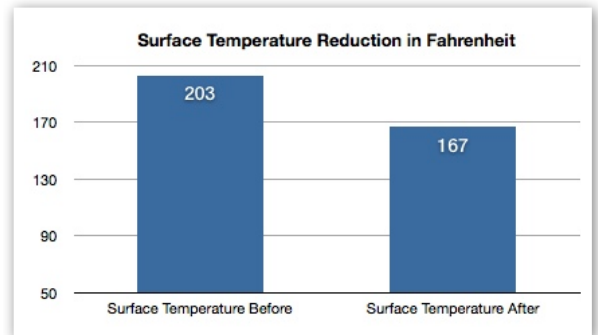

Grupo Modelo, makers of Corona Beer, was looking for a way to effectively insulate equipment and reduce energy consumption at their Guadalajara, Mexico facility.

Nansulate® Translucent High Heat coating by Industrial Nanotech, Inc. was applied to heat exchangers and other steam equipment to insulate, protect against corrosion, and decrease the amount of energy used for manufacturing processes.

**Results showed a 20 degrees Centigrade (36 Fahrenheit) temperature reduction after only a 3- coat coverage** (approximate thickness of 7 mils dry film thickness).

Nansulate® technology is helping to ensure that Corona Beer is made more sustainably and is providing a cost savings to Grupo Modelo.
